**Custom Base Log Calculator Mac Download**

Is there a function that has the ability to calculate a log function with a custom/variable base? Or maybe there is an alternative method of completing this formula.. In objective-c, I know there are log functions that calculate without a base and base of either 2 or 10.. The basic idea of my formula is this log(1+0 02)(1 26825) (1+0 02 is the base).
